

## E.I.M. delivered Eighteen sets of High-Head Submersible Pumps to the Middle East

Recently, a total eighteen (18) sets of E.I.M. High-head Submersible Pumps was delivered for operation in the renewal and expansion project of a waterworks project in the Middle East.

They are to replace the old existing vertical pumps.

These pumps were chosen because of their superior performance, which includes easier maintenance.

These pumps will be installed in the raw-water intake pits to transfer raw water to the filtration and purification plant. They will ensure an important supply source of drinking water to the nearby communities.
